SUMMARY

Full-stack developer with a distinctive blend of ERP business logic (AL / Dynamics 365 Business Central) and UX/UI design background. Builds scalable web applications end-to-end with Next.js, TypeScript and Supabase, and translates complex business requirements into clean, high-performance digital products.

SKILLS

Frontend: Next.js 14, React, TypeScript, Tailwind CSS

Backend & Data: Node.js, Supabase (Auth/RLS), SQL, RDLC Reports

ERP: AL Language, Dynamics 365 Business Central customization, debugging & implementation

Design: Figma, UX/UI Design, Design Systems, Brand Identity

Languages: Thai (native), English (professional)

EXPERIENCE

Programmer & Implementation Consultant — Bigwork

Jan 2026 – Present

- Debug and resolve complex business logic and system-level issues in AL Language and SQL for an active Dynamics 365 Business Central implementation.
- Lead hands-on implementation for an enterprise client, from requirements gathering to configuration, customization and go-live support.
- Design and build high-precision RDLC reports, translating business reporting requirements into production-ready templates.
- Manage and maintain database structures supporting enterprise ERP operations for a manufacturing client.

Middle UX/UI & Graphic Designer — Codelabs Tech

Aug 2025 – Nov 2025

- Designed intuitive, user-centric web and mobile interfaces in Figma, from wireframes through high-fidelity prototypes.
- Built and maintained scalable Design Systems that streamlined handoff and consistency between design and frontend development.

Graphic Designer — Mind DoJo

Apr 2025 – Jul 2025

- Owned Corporate Identity (CI) guidelines, ensuring visual consistency across digital and print brand touchpoints.
- Produced high-impact visual assets for social content and large-scale exhibition booths.

PROJECTS

Potter Mobile Pawn — Production phone pawn-shop management system · Next.js 16, Supabase, Puppeteer

- Built the full pawn-contract lifecycle (request → digital signature → interest/penalty calc → redemption/sale) with 3-tier RBAC enforced via Postgres Row-Level Security by branch and role.
- Implemented server-side PDF contract generation (Puppeteer + headless Chromium) with digital signatures and QR status checks, a cash-ledger module, and 20+ Supabase migrations supporting multi-branch and audit logging.
- Deployed as a standalone PWA on an in-store iPad — live production use, not a demo.

Potter Mobile+ — Used-phone buy/sell platform · Next.js 16, Supabase, Claude API

- Built customer-facing booking/store/cart flows plus an Admin Backoffice with RBAC (admin/manager/super) covering stock, orders, users, promotions and a sales analytics dashboard.
- Integrated Supabase Realtime for support chat, the Claude API to auto-assess buyback pricing, and PromptPay QR payments with Cron-driven order lifecycle management.

Cinema Ticket Booking System — Concurrent seat reservation platform · Go/Gin, Vue 3/Pinia, MongoDB, Redis, WebSocket, Firebase Auth, Docker

- Engineered a distributed seat-locking mechanism (Redis SETNX + TTL, atomic Lua release script) guaranteeing zero double-booking under concurrent load; verified with a 50-goroutine race test.
- Built real-time seat sync over a custom WebSocket hub, Firebase Auth with role-based access, and a MongoDB aggregation-powered admin dashboard, containerized end-to-end with Docker Compose.

EDUCATION

King Mongkut's Institute of Technology Ladkrabang (KMITL)

IT, Multimedia & Game Development — Bangkok, Thailand 2021 – 2025
